

Equitichain Ecosystem Technical Whitepaper

Dual-Token System: EQT & EQTM

Technical Whitepaper — August 2025 (TGE: 25 August 2025)

Executive Summary

Equitichain is transitioning into a dual-token ecosystem with EQT (the flagship standard token) and EQTM (the meme-powered liquidity token).

EQT ensures institutional adoption with limited supply, while EQTM fuels grassroots engagement and liquidity. EQT has a total supply of 250,000,000 EQT each on the Binance Smart chain and Solana Network, launching with 50,000 EQT at \$250,000 per token value, with an annual release of 100 EQT.

EQTM has a supply of 20,000,000,000,000 tokens at \$2.5 each, designed with a 5% transaction tax that reinforces liquidity, rewards, and buybacks.

Together, EQT provides stability while EQTM powers adoption and community growth.

Introduction & Background

Equitichain began with the vision of blending scalability and community engagement. With the Token Generation Event (25 August 2025), Equitichain unifies its ecosystem under two tokens:

- EQT for institutional credibility and EQTM for market energy. This migration consolidates Bloomshares (BMB), Cryptoshares (SHARES), WSHARES, and USDS into EQT, protecting value while enabling growth. EQT is positioned as a high-value token for CEX listings and institutional demand.
- EQTM is designed for community traction, liquidity generation, and visibility.

This dual structure ensures the project appeals to both serious investors and meme-driven communities, forming a balanced blockchain ecosystem that prepares for the EQT20 mainnet swap.

Technical Architecture

EQTM operates on Binance Smart Chain and Solana, offering fast, low-cost transactions.

Its 5% transaction tax ensures liquidity (2%), burn (1%), EQT rewards (1%), and marketing (1%) are sustained automatically. All operations are governed by multisig wallets, lock/vesting contracts, and public audits.

EQT, in contrast, is a no-tax token focused on scarcity and institutional trust, with only 100 EQT released annually. A guaranteed 1:1 swap to EQT20 upon mainnet launch future-proofs EQT. Together, the architecture separates value anchoring (EQT) from liquidity generation (EQTM), ensuring stability and scalability for the ecosystem while enabling simple migration.

Tokenomics

EQTM Tokenomics:

Total supply 20,000,000,000,000 EQTM at \$2.5.

Allocation:

- 40% Presale, 30% Locked Liquidity,
- 15% Marketing (vested),
- 10% Donations (innovative tokenized projects),
- Reserve 5%.
- Transaction tax: 2%
- Auto-LP, 1%
- Buyback & Burn,
- 1% EQT Rewards,
- 1% Marketing.

EQT Tokenomics:

- Total supply 500,000,000 EQT (split into 250m token on BSC chain and 250m on Solana network),
- Initial release 50,000 at \$250,000 each.
- Annual release: 100 EQT.
- No presale, no tax, no airdrops; 1:1 swap to EQT20 on mainnet.

The dual model combines EQT's scarcity and institutional positioning with EQTM's liquidity and community engagement.

Charts and emission models demonstrate how this structure balances stability and growth while funding long-term development.

EQTM Token Allocation

EQT acts as Equitichain institutional-grade anchor, designed for CEX listings, partnerships, and as a store of value. It guarantees a 1:1 swap to EQT20, ensuring seamless mainnet adoption.

EQTM drives community momentum, auto-generates liquidity, and funds ecosystem growth. With its transaction tax, EQTM sustains buybacks, burns, and rewards, while its donations allocation supports innovative tokenized projects. This separation ensures the ecosystem benefits from both institutional trust (EQT) and viral adoption (EQTM), combining meme culture with serious DeFi infrastructure. EQTM provides energy while EQT provides stability for builders, traders, and long-term holders.

Roadmap

- **2025:** Token Generation Event (25 August). Migration of legacy tokens (BMB, SHARES, WSHARES, USDS) to EQT via Mintrax. EQTM presale, liquidity locks, and launch.
- **2026:** NFT integrations (EquiNFTs), EQTM staking, EQT CEX listings, and expanded liquidity pools.
- **Late 2026:** EQT20 mainnet swap and governance introduction.
- **2027+:** Institutional partnerships, meme adoption campaigns, tokenized donation projects, and cross-chain ecosystem expansion.

This roadmap ensures a steady balance of liquidity growth, institutional adoption, and community engagement with full transparency.

Conclusion

Equitichain's dual-token system defines a new era: EQT secures value and institutional trust, while EQTM powers liquidity and visibility.

Migration by 25 August 2025 is essential to preserve assets and gain access to EQT.

EQT anchors credibility; EQTM amplifies adoption. Together they form a transparent, scalable, and community-first blockchain ecosystem. This balance positions Equitichain to become both a financial powerhouse and a cultural movement, bridging serious DeFi with meme-driven engagement. Equitichain is not just a migration—it is the foundation of a new financial ecosystem built on trust, transparency, and innovation.
